## 1. Safety Instructions

### WARNING

Please read the instruction carefully which includes important information about the installation, usage and maintenance.

Please keep this User Guide for future consultation. If you sell the unit to another user, be sure that they also receive this instruction booklet.

- Please unpack and check carefully there is no transportation damage before using the unit.
- Before operating, ensure that the voltage and frequency of power supply match the power requirements of the unit.
- It's important to ground the yellow/green conductor to earth in order to avoid electric shock.
- The unit is for indoor use only. Use only in a dry location.
- The unit must be installed in a location with adequate ventilation, at least 50cm from adjacent surfaces. Be sure that no ventilation slots are blocked.
- Please disconnect main power before replacement or servicing.
- Please make sure there are no flammable materials close to the unit while operating as it is fire hazard.
- Please use safety cable when fixes this unit. DO NOT handle the unit by taking its head only, but always by taking its base.
- Maximum ambient temperature is  $T_a$ : 40°C. DO NOT operate it where the temperature is higher than this.
- Unit surface temperature may reach up to 75°C. DO NOT touch the housing bare-hand during its operation. Turn off the power and allow about 15 minutes for the unit to cool down before replacing or serving.
- In the event of serious operating problem, stop using the unit immediately. Never try to repair the unit by yourself. Repairs carried out by unskilled people can lead to damage or malfunction. Please contact the nearest authorized technical assistance center. Always use the same type spare parts.
- DO NOT touch any cables during operation as high voltage might be causing electric shock.

### **Warning:**

- To prevent or reduce the risk of electrical shock or fire, do not expose the unit to rain or moisture.
- The housing, the lenses, or the ultraviolet filter must be replaced if they are visibly damaged.

### **Caution:**

There are no user serviceable parts inside the unit. DO NOT open the housing or attempt any repairs yourself. In the unlikely event your unit may require service, please contact your nearest dealer.

### **Installation:**

The unit should be mounted via its Omega Quick Release Clamp bracket. Always ensure that the unit is firmly fixed to avoid vibration and slipping while operating. Make sure that the structure to which you are attaching the unit is secure and is able to support a weight of 10 times of the fixtures weight. Also always use a safety cable that can hold 12 times of the weight of the unit when installing the fixture.

The equipment must be installed by professionals. It must be fixed in a place where is out of the reach of people and no one can pass by or under it.

## **2. Technical Specifications**

- ◇ DMX 512 Channels: 5/6/8 channels
- ◇ Control Mode: DMX512
- ◇ LCD display for easy navigation
- ◇ 0%-100% smooth dimming and various strobe speeds
- ◇ Flicker free

- **Power Voltage:** AC 100~240V, 50/60Hz
- **Power Consumption:** 285W
- **Light Source:** 7pcs RGBW LED
- **Beam Angle:** 5°~50°

- **Weight:** 8.3Kgs
- **Dimension:** 335×362×343mm

### 3. How To Set The Unit

#### 3.1 Control panel

- 1. DMX IN:** For DMX512 link, use 3-pin XLR plug cable to input DMX512 single.
- 2. DMX OUT:** For DMX512 link, use 3-pin XLR plug cable to output DMX512 single to the next unit.
- 3. DMX IN:** For DMX512 link, use 5-pin XLR plug cable to input DMX single.

**4. DMX OUT:** For DMX512 link, use 5-pin XLR plug cable to output DMX512 signal to the next unit.

**5. Display:** To show the various menus and the selected functions

**Button:**

<b>6. MENU</b>	To select the programming functions
<b>7. DOWN</b>	To go backward in the selected functions
<b>8. UP</b>	To go forward in the selected functions
<b>9. ENTER</b>	To confirm the selected functions

**LED:**

<b>10. POWER</b>	On	Power On
<b>11. DMX</b>	On	DMX input present

**12. POWERCON IN:** Connect to supply power for the fixture.

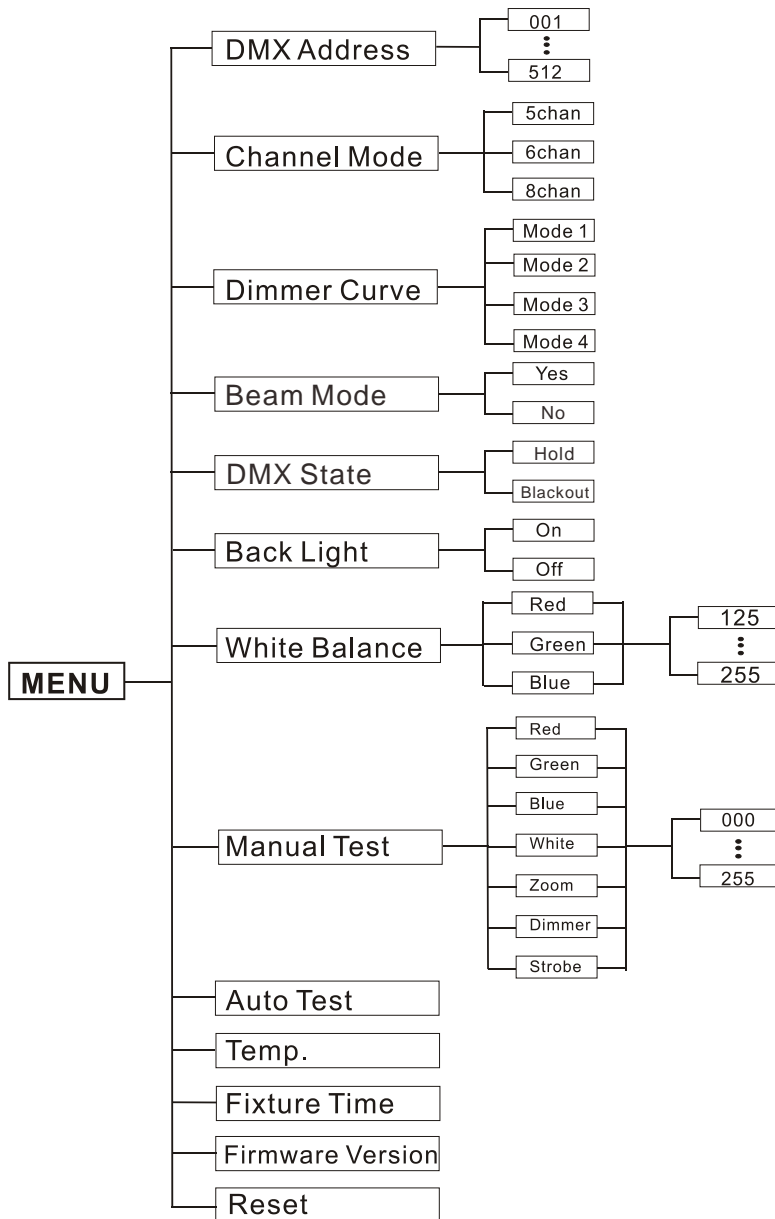

**13. POWERCON OUT:** Connect to supply power to the next fixture.

**14. Fuse (T 6.3A):** Protect the fixture from damage of current.

### **3.2 Main Functions**

To select any of the given functions, press the **MENU** button up to when the required one is showing on the display. Select the function by the **ENTER** button and the display will blink. Use the **DOWN** and **UP** button to change the mode. Once the required mode has been selected, press the **ENTER** button to setup, to go back to the functions without any change press the **MENU** button again. Hold and press the **MENU** button about one second or wait for one minute to exit the menu mode.

The main functions are showing below:

## DMX Address

Select the **DMX Address**, press the **ENTER** button and the display will blink. Use the **DOWN** and **UP** button to change the DMX 512 Address, and then press the **ENTER** button to save. Back to the previous functions without any change press the **MENU** button.

## Channel Mode

Select the **Channel Mode**, press the **ENTER** button and the display will blink. Use the **DOWN** and **UP** button to select the **5chan**, **6chan** or **8chan** mode. Once the mode has been selected, press the

**ENTER** button to save or automatically exit menu mode without any change. Back to the previous functions without any change press the **MENU** button.

## Dimmer Curve

Select **Dimmer Curve**, press the **ENTER** button to confirm, present mode will blink on the display. Use the **DOWN** and **UP** button to select the **Mode1** or **Mode 2** or **Mode 3** or **Mode 4** mode. Once the mode has been selected, press the **ENTER** button to setup, to go back to the functions without any change press the **MENU** button again. Hold and press the **MENU** button about one second or wait for one minute to exit the menu mode.

### Dimmer Modes

Optically Linear

Square Law

Inverse Square Law

S-curve

**Mode 1 (Optically Linear):** The increase in light intensity appears to be linear as DMX value is increased.

**Mode 2 (Square Law):** Light intensity control is finer at low levels and coarser at high levels.

**Mode 3 (Inverse Square Law):** Light intensity control is coarser at low levels and finer at high levels.

**Mode 4 (S-cure):** Light intensity control is finer at low levels and high levels and coarser at medium levels.

## Beam Mode

Select the **Beam mode**, press the **ENTER** button and the display will blink. Use the **DOWN** and **UP** button to select the **Yes** (Beam mode) or **No**(Normal). Once selected, press the **ENTER** button to save or automatically exit menu mode without any change. Back to the previous functions without any change press the **MENU** button.

## DMX State

Select the **DMX State**, press the **ENTER** button and the display will blink. Use the **DOWN** and **UP**

button to select the **Blackout** (blackout) or **Hold** (keep the present status). Once selected, press the **ENTER** button to save or automatically exit menu mode without any change. Back to the previous functions without any change press the **MENU** button.

### **Back Light**

Select the **Back Light**, press the **ENTER** button and the display will blink. Use the **DOWN** and **UP** button to select the **On** or **Off**. Once selected, press the **ENTER** button to save or automatically exit menu mode without any change. Back to the previous functions without any change press the **MENU** button.

### **White Balance**

Select the **White Balance**, press the **ENTER** button and the display will blink. Use the **DOWN** and **UP** button to find the color (**Red, Green, Blue**) you wish to adjust. Press the **ENTER** button to confirm and use **DOWN** and **UP** button to adjust the value (**125~255**), once select press **ENTER** button to setup or automatically exit menu mode without any change after 7seconds. To go back to the last function without any change press the **MENU** button.

### **Manual Test**

Select the **Manual Test**, press the **ENTER** button and the display will blink. Use the **DOWN** and **UP** button to find the **Red, Green, Blue, White, Zoom** and **Dimmer** or **Strobe**. Once you find a function or color you wish to test, press the **ENTER** button, the displayed value will begin to flash. You can now adjust the values (**000~255**) by pressing the **DOWN** and **UP** button. Once you have finished testing press the **ENTER** button. To go back to the last function without any change press the **MENU** button.

### **Auto Test**

Select the **Auto Test**, press the **ENTER** button, the unit will run the built-in programmer for self test. Press the **MENU** button to exit.

### **Temp.**

Select the **Temp.**, press the **ENTER** button and the display will show the current running

temperature of the fixture. Press the **MENU** button to exit.

### Fixture Time

Select the **Fixture Time**, press the **ENTER** button and the display will show the running time of the fixture. Press the **MENU** button to exit.

### Firmware Version

Select the **Firmware Version**, press the **ENTER** button and the display will show the software version of the fixture. Press the **MENU** button to exit.

### Reset

Select the **Reset**, press the **ENTER** button and the fixture will now reset.

## 3.3 Home Position Adjustment

**Zoom Offset**—zoom home position adjustment

Enter offset mode, Select **Zoom Offset**, press the **ENTER** button to confirm, the present position will blink on the display, use the **UP/DOWN** button to offset the value from 0 to 255, press the **ENTER** button to store. Press the **MENU** button to exit.

## 4. How to Control the Unit

Please access the fixture in two ways:

1. By master/slave built-in preprogram function
2. By DMX controller

No need to turn the fixture off when you change the DMX address, as new DMX address setting will be affected at once. Every time you turn the fixture on, it will show “MP-350Z” on the display and move all the motors to their ‘home’ position. After that the fixture will be ready to receive DMX signal or run the built in programs.

## 4.1 DMX Controller

Use universal DMX controller to control the fixtures, you have to set DMX address from 1 to 512 channel so that the units can receive DMX signal.

Press the **MENU** button, select the **DMX Address**. Pressing the **ENTER** button and the display will blink. Use the **DOWN** and **UP** button to change the DMX512 address. Once the address has been selected, press and keep **ENTER** button to save. To go back to the functions without any change press the **MENU** button again.

If you use please refer to the following diagram to address your DMX512 channel for the first 4 fixtures.

Channel Mode	Fixture 1 Address	Fixture 2 Address	Fixture 3 Address	Fixture 4 Address
5 channels	1	6	11	16
6 channels	1	7	13	19
8 channels	1	9	17	25

## 4.2 DMX 512 Configurations

**5/6/8 Channels Mode:**

## DMX512 Configurations

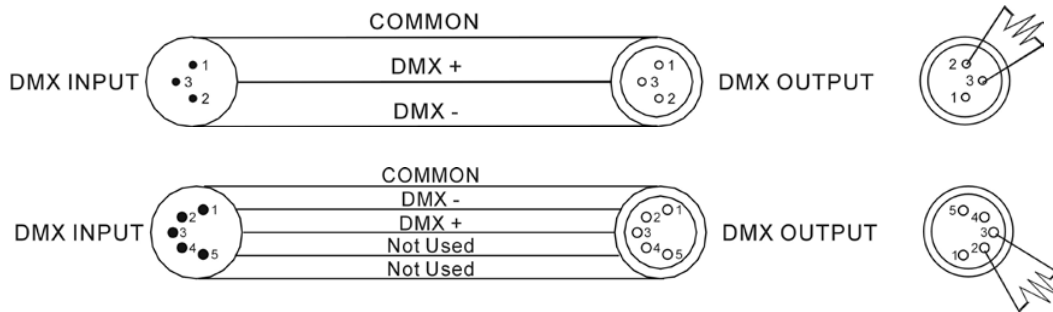

5 Channels Mode					6 Channels Mode					
Ch1	Ch2	Ch3	Ch4	Ch5	Ch1	Ch2	Ch3	Ch4	Ch5	Ch6
RED	GREEN	BLUE	WHITE	ZOOM	RED	GREEN	BLUE	WHITE	DIMMER	ZOOM

8 Channels Mode							
Ch1	Ch2	Ch3	Ch4	Ch5	Ch6	Ch7	Ch8
RED	GREEN	BLUE	WHITE	DIMMER	STROBE	COLOR	ZOOM
					<p>248~255 Open</p> <p>240~247 Random Strobe</p> <p>232~239 Open</p> <p>190~231 Slow Close Fast Open</p> <p>182~189 Open</p> <p>140~181 Slow Open Fast Close</p> <p>132~139 Open</p> <p>016~131</p> <p>008~015 Open</p> <p>000~007 Off</p>	<p>248-255 Preset color32</p> <p>241-247 Preset color31</p> <p>233-240 Preset color30</p> <p>225-232 Preset color29</p> <p>217-224 Preset color28</p> <p>210-216 Preset color27</p> <p>202-209 Preset color26</p> <p>194-201 Preset color25</p> <p>186-193 Preset color24</p> <p>179-185 Preset color23</p> <p>171-178 Preset color22</p> <p>163-170 Preset color21</p> <p>155-162 Preset color20</p> <p>148-154 Preset color19</p> <p>140-147 Preset color18</p> <p>132-139 Preset color17</p> <p>124-131 Preset color16</p> <p>117-123 Preset color15</p> <p>109-116 Preset color14</p> <p>101-108 Preset color13</p> <p>093-100 Preset color12</p> <p>086-092 Preset color11</p> <p>078-085 Preset color10</p> <p>070-077 Preset color9</p> <p>062-069 Preset color8</p> <p>055-061 Preset color7</p> <p>047-054 Preset color6</p> <p>039-046 Preset color5</p> <p>031-038 Preset color4</p> <p>024-030 Preset color3</p> <p>016-023 Preset color2</p> <p>008-015 Preset color1</p> <p>000-007 Open</p>	

## 5. DMX 512 Connections

The DMX512 is widely used in intelligent lighting control, with a maximum of 512 channels.

1. If you using a controller with 5 pins DMX output, you need to use a 5 to 3 pin adapter-cable.
2. At last unit, the DMX cable has to be terminated with a terminator. Solder a 120 ohm 1/4W resistor between pin 2(DMX-) and pin 3(DMX+) into a 3-pin XLR-plug and plug it in the DMX-output of the last unit.
3. Connect the unit together in a `daisy chain` by XLR plug from the output of the unit to the input of the next unit. The cable can not branched or split to a `Y` cable. DMX 512 is a very high-speed signal. Inadequate or damaged cables, soldered joints or corroded connectors can easily distort the signal and shut down the system.
4. The DMX output and input connectors are pass-through to maintain the DMX circuit, when one of the units' power is disconnected.
5. Each lighting unit needs to have an address set to receive the data sent by the controller. The address number is between 0-511 (usually 0 & 1 are equal to 1).
6. The end of the DMX 512 system should be terminated to reduce signal errors.

7. 3 pin XLR connectors are more popular than 5 pin XLR.

3 pin XLR: Pin 1: GND, Pin 2: Negative signal (-), Pin 3: Positive signal (+)

5 pin XLR: Pin 1: GND, Pin 2: Negative signal (-), Pin 3: Positive signal (+),

Pin 4/Pin 5: Not used.

## **6. Troubleshooting**

Following are a few common problems that may occur during operation. Here are some suggestions for easy troubleshooting:

### **A. The unit does not work, no light and the fan does not work**

1. Check the connection of power and main fuse.
2. Measure the mains voltage on the main connector.
3. Check the power on LED.

### **B. Not responding to DMX controller**

1. DMX LED should be on. If not, check DMX connectors, cables to see if link properly.
2. If the DMX LED is on and no response to the channel, check the address settings and DMX polarity.
3. If you have intermittent DMX signal problems, check the pins on connectors or on PCB of the unit or the previous one.
4. Try to use another DMX controller.
5. Check if the DMX cables run near or run alongside to high voltage cables that may cause damage or interference to DMX interface circuit.

### **C. One of the channels is not working well**

1. The stepper motor might be damaged or the cable connected to the PCB is broken.
2. The motor's drive IC on the PCB might be out of condition

## **7. Fixture Cleaning**

The cleaning must be carried out periodically to optimize light output. Cleaning frequency depends on the environment in which the fixture operates: damp, smoky or particularly dirty surrounding can cause greater accumulation of dirt on the unit's optics.

- Clean with soft cloth using normal glass cleaning fluid.
- Always dry the parts carefully.
- Clean the external optics at least every 30 days.

## **Declaration of Conformity**

We declare that our products (lighting equipments) comply with the following specification and bears CE mark in accordance with the provision of the Electromagnetic Compatibility (EMC) Directive 89/336/EEC.

EN55103-1: 2009+A1:2012; EN55103-2: 2009;  
EN61000-3-2: 2014; EN61000-3-3: 2013.
